Three evidence channels / proposed for both static and dynamic tasks

T / Text

Current + target: part, color, pose
Stock: part handles and availability
Text previews / optional manual

I / Images

Current + target: matched views
Stock: labeled visual cards
Image previews / optional manual

TI / Text + images

Both encodings of the same state
Same timestamps and anonymous IDs
No error label or repair answer

Static: supplied checkpoint. Dynamic: request evidence; retain history; hidden edits persist.

Shared: goal, stock, actions, budgets, scoring. Text coordinates disclose more than native RGB.

Matched-fact control: render the same ledger as image cards. This tests representation / OCR, not 3D perception.
