

CX3 | Typed correspondence + rigid pose recovery | OMR 42061

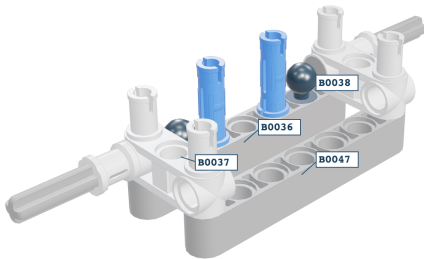

Match the four anchors by part type and geometry; recover $q = R p + t$ with $\det(R) = +1$.
Maximum error: 0.05 mm. Predict the transformed origin and local x-axis of B0030.

Subassembly A: 12 parts, original pose

ID	Type	Origin (x, y, z), mm
B0024	32524	(8, 16.8, 120)
B0025	6628	(24, 20.8, 120)
B0026	6628	(-8, 20.8, 120)
B0035	32524	(8.562, 16.8, 104.01)

Subassembly B: 12 parts, original pose

ID	Type	Origin (x, y, z), mm
B0047	32524	(7.438, 16.8, 15.99)
B0038	6628	(24, 20.8, 0)
B0037	6628	(-8, 20.8, 0)
B0036	32524	(8, 16.8, 0)

Probe B0030: origin (43.9924, 24.8, 120.4212) mm; x-axis (-0.99938684, 0, -0.03501355).

GT: $R = \text{diag}(-1, 1, -1)$, $t = (16, 0, 120)$ mm. Exactly 1 of 4 types-only assignments passes.

B0024→B0036; B0025→B0037; B0026→B0038; B0035→B0047.
B0030 maps to (-27.9924, 24.8, -0.4212) mm; x-axis = (0.99938684, 0, 0.03501355).
