

CX1 | Multi-fault minimum repair | OMR 42004

Restore the fewest of 8 missing vertices to reconnect B0158, B0171, B0179 and B0180.
Every restore reinstates the original incident edges. Is a budget of 2 sufficient?

Actual 36-part source subassembly

Exact component contraction after faults

Missing: B0150, B0160, B0164, B0165, B0167, B0173, B0175, B0177

GT: {B0160, B0175, B0177}; minimum cost = 3; budget 2 is infeasible.

Initial component sizes: 18, 5, 2, 2, 1. After the minimum repair: one 31-vertex component.
All 256 subsets are enumerated; none of the 37 subsets of size 0, 1 or 2 succeeds.
